Nguyen Dinh Thai

PHP Developer

0329374812

thai200210@gmail.com

Tu Hiep, Thanh Tri, Ha Noi

OBJECTIVE

- Short-term goal: Accumulate more experience in the field of information technology, practice effective work handling skills
- Long-term goal: Achieve a Senior Backend Developer position within the next 3-4 years. Create many quality products, contribute and stay long term with the company

EDUCATION

THUY LOI UNIVERSITY

2020 - 2024

Information systems

GPA: 3.3

SKILLS

| HIML, CSS, JS, Bootstrap, |
|---------------------------|
| Jquery, VueJS |
| |

Have knowledge of website design

PHP (laravel, cake)

Understand the structure and construction of the framework

C++, Java

Knowledge of data structures and algorithms, object-oriented programming

PYTHON

Knowledge of machine learning models, processing, data analysis

SQL SERVER, MySQL, **PostgreSQL**

Analyze, design, and build database for the system

AWS, EC2, ECS, RDS

Analyze, report application performance, manage application deployment

Git, Github, postman

Make good use of code management tools and API testing

WORK EXPERIENCE

Border - Z 05/2024 - Present

Backend Developer

- Popcorn (gokkoclub.jp/)
 - This is a short video viewing project for mobile devices.
 - Analyzed requirements and designed the database structure.
 - Develop APIs for user functionalities on the mobile app: Authentication, Authorization, payment verification via Apple Store and Google Play, and integration with social platforms such as Apple, Google, and TikTok.
 - Created a Google Apps Script to automate data scheduling and insertion from Google Sheets into the database.
 - · Build an Admin page using BackPack: Includes report charts, video management, and user management.
 - Configured and optimized Docker for development and production.
 - Deployed the project on AWS, incorporating Cloudflare for enhanced performance and security.
 - · Load test, system optimization
 - Technology: Laravel 11, Mysql, Docker, AWS, Cloudflare.
- VIL (PMS):
- · Developed system features including sales reporting, appointment scheduling, and role-based access control.
- · Diagnosed and resolved critical bugs while accommodating customer-specific requirements for improved functionality.
- Managed seamless asynchronous data synchronization between Elasticsearch and MySQL to ensure data consistency.
- Technology: Cake PHP, Jquery, MySQL, Elastichsearch.
- HRM Project:
 - Conducted system analysis and designed core functionalities.
 - Designed and structured the database for optimal performance.
 - Developed key features including employee management, time tracking, leave requests, and automated Excel report generation.
 - Created a user-friendly interface for seamless interaction.
 - Technology: Next.js, PHP Laravel, JWT authentication, and MySQL database.

Amaisoft JSC 02/2023 - 06/2023

Backend Developer

- Build recruitment API for company website
- · Build an API to export report excel files
- Edit the interface for the website using nuxtjs
